

Business Insights, Business Problems Solved & Dashboard Significance

Project: Online Retail Store Management (Excel → SQL Server → Power BI)

Purpose: This executive dashboard converts raw transactional data into meaningful business intelligence, allowing management to monitor performance, identify opportunities, and make faster data-driven decisions.

Overall Business Problems Solved

- Eliminates manual analysis of thousands of sales records.
- Provides a single source of truth for executive reporting.
- Detects revenue growth or decline early.
- Identifies best performing products.
- Highlights profitable customer segments.
- Reveals regional performance differences.
- Supports inventory, pricing and marketing decisions.
- Monitors business performance using key KPIs.

Visuals and Their Business Significance

Visual / KPI	Why it is Used	Business Problem Solved	Business Impact

Key Business Questions Answered

- Is the business growing compared to last year?
- Which products generate the most revenue?
- Which customer segment is most profitable?
- Which product category should receive more investment?
- Which regions require management attention?
- Are customers buying more products or simply spending more per order?
- Which products should be prioritized for inventory?

Business Value

- Faster executive decision-making.
- Reduced reporting time.
- Improved sales and inventory planning.
- Better marketing budget allocation.
- Identification of revenue growth opportunities.
- Data-driven strategic planning instead of intuition.
